

DIY Winter Border Project

STEP 1:

Drill six small holes in the bottom of each galvanized container for drainage. Be sure to use a bit appropriate for galvanized metal.

STEP 2:

Align the containers in the desired location and fill with soil.

STEP 3:

Remove each Mountain Snow Pieris from its original container. Loosen the roots before planting.

STEP 4:

Plant two Mountain Snow Pieris side-by-side in each galvanized container.

MATERIALS:

- (3) Large galvanized containers
- (6) Mountain Snow™ Pieris
- (4) Large bags of soil

TOOLS:

- (1) Drill

These tiny buds are about to be transformed into blooms. I can assure you it's worth planting the Mountain Snow Pieris now, as it makes for a delightful early-spring show. Plus, the blooms are perfect for centerpieces.

You now have a lovely, seasonal border from one simple weekend project. And, once temperatures rise, you may plant these beauties in the ground for year-after-year of early-spring displays
